

Miss-Misdiagnosed Uterus Didelphys in a pregnant lady with vaginal bleeding: a rare case

<http://ijpronline.com/ViewArticleDetail.aspx?ID=7522>

ABSTRACT

Uterus didelphys is a condition due to a defect in the wall of the uterus, where the Mullerian ducts cannot ~~be fused~~ together and ~~whereby~~ two uterus and cervix arise. ~~It is~~ This condition is important due to the ~~obstetrical~~ complications ~~of obstetrical~~. We present a patient with a pregnancy in ~~the~~ right horn due to uterus didelphys after emergency cesarean section at ~~the~~ 32nd ~~weeks~~ of gestation.

Keywords: Mullerian ducts, didelphys.

1. Introduction

Uterus didelphys or double uterus is a condition due to a defect in the wall of the uterus, where the Mullerian ducts cannot be fused together and ~~hence~~ the two uterus and cervix arise. (1,2).

~~the~~ The prevalence of uterine didelphys is rare, ~~and though is~~ causes concern in ~~the~~ reproductive age. It is important due to the ~~its obstetrical~~ complications ~~of obstetrical~~ such as increased risks of abortion, premature labor pain, breech presentation and ~~increased~~ risk of cesarean delivery (1,2).

Uterus didelphys is associated with urinary system anomalies. Pregnancy is unusual in the uterus of didelphys. ~~The~~ prevalence varies from 1 in 1500 to 1 in 142,000 per year. ~~Further,~~ 5 to 7% ~~percent~~ of the Mullerian anomaly ~~is~~ associated with the uterus didelphys (3).

~~In this condition,~~ doubling of the anus bladder, vagina, urethra, and vulva can ~~also~~ occur. In patients with a septated vagina, it is difficult for them to have normal sexual intercourse or vaginal delivery. (8).

~~With Uterus didelphys,~~ Bilateral obstruction may occur, and the patient may ~~refer-visit the physician~~ with primary amenorrhea (9).

CASE REPORT

~~a~~ A 30-year-old primigravida from ~~Y~~yasouj, who came to ~~Obstetric~~ obstetrics department, with sever vaginal bleeding and fetal distress ~~at~~ at the 32nd ~~weeks~~ and 2 days. ~~a~~ A fetal heart rate of 160 at baseline, moderate variability, with decelerations and no accelerations ~~were~~ observed. ~~Also,~~ the ~~B~~lood Pressure ~~was~~ 100/70 mmHg and the patient's heart rate ~~was~~ 90 beats/minute. ~~She was patient~~ transferred to ~~the~~ operation room and a double set up exam ~~are~~ were done for ~~him-her,~~ whereby ~~and 2~~ two separate ~~cervix cervices~~ visualized ~~were~~ observed on either side of ~~the~~ vaginal septum. The longitudinal vaginal septum was found and the right cervix was 2/70/-3 with the left
